

**Illinois Statewide Report of Adult ICU Central Line-associated Blood Stream Infections (CLABSI)  
Acute Care and Critical Access Hospitals - NHSN Event Reporting  
January 1, 2017 – December 31, 2017**

Healthcare-associated infections (HAIs) are infections patients can get while receiving medical treatment in a healthcare facility, these infections are a major and often preventable threat to patient safety. The Illinois Department of Public Health (IDPH) is working with the Centers for Disease Control and Prevention (CDC), and other health partners to reducing and eliminating HAIs.

This report is meant to help patients who need inpatient medical treatment decide whether they should be concerned about healthcare-associated infections (HAIs) at the hospital they may choose. Patients should know that these infections are unintended. Ideally, healthcare-associated infections should never happen, but sometimes they do.

It is important for the patients and their family members or advocates to use this information to ask healthcare providers questions before seeking and while receiving medical treatment. Asking the right questions can help patients and family members learn what they can do to prevent infections.

The Hospital Report Card Act (Illinois Public Act 93-563) requires Illinois hospitals to report central line-associated bloodstream infections (CLABSIs) occurring in critical care units, also known as intensive care units (ICUs). Comparison summary data for CLABSIs are presented by hospital for each ICU type (ex. Medical, Surgical and Medical/Surgical). This report looks at incidence of **CLABSI** in Adult, Neonatal, and Pediatrics ICU in Illinois acute care and critical access hospitals. Hospitals are required by law to report these healthcare-associated infections to the Illinois Department of Public Health (IDPH). More information about Illinois' mandatory reporting can be found here [Hospital Report Card Act](#).

This report gives a good overview of how a hospital is doing in preventing healthcare-associated infections. These infections are largely preventable when healthcare providers use infection prevention steps recommended by the CDC. The information in this report can help you to think about whether a particular hospital is the best place for you to receive care. However, there are other things to consider when making a decision about where to get your care. You should use this information as a starting point to ask your healthcare provider questions, and use the answers in your decision making.

**Central Line-Associated Bloodstream Infection (CLABSI) Statewide Consumer Report**  
**Reportable Period: January 1, 2017 - December 31, 2017**

**LEGEND**

	Fewer events ( <b>better</b> ) than predicted based on the national experience *	=	About the <b>same</b> number of events as predicted based on the national experience *		More events ( <b>worse</b> ) than predicted based on the national experience *	<b>No Conclusion</b>	When the number of predicted events is less than 1, no conclusion can be made		Congratulations on achieving <b>ZERO</b> infections!
<i>*National experience contains data from 2015 for Central Line-Associated Bloodstream Infection (CLABSI) Events</i>									

**Central Line-Associated Bloodstream Infection (CLABSI) Consumer Report by Facility and Unit Type**

*Illinois collects CLABSI data from adult and pediatric intensivecare units (ICUs), and neonatal ICUs (NICUs). Only those unit types from which data have been reported and/or that are present in the facility will be shown in the following summary tables*

[Reading Guide to the Health Care Associated Infection Data Tables: Explanation of each variable](#)

Below is a list of all variables shown in the Health Care Associated Infection data tables:

- **Title:** The title of the table gives you information about the infection type, time period, geographic location, and facility type included in the table.
- **Hospital Name:** This is the name of the facility. Facilities with multiple campuses will have each campus identified separately.
- **Observed Infections (or Observed Events):** This is the number of infections (or events, for LabID measures) that was reported by the facility.
- **Predicted Infections (or Predicted Events):** This is a calculated value that reflects the number of infections (or events, for LabID measures) that we have “predicted” to occur in this facility, based on the national experience.
- **“How Does This Facility Compare to Other Hospitals Across the Country?”** Colors and symbols are used to help you quickly understand and interpret the facility’s data. This is the “take-home message” about healthcare-associated infections in this facility.
